

# DEFENCE SYSTEMS

*The Dry Air Specialists*

- **Material doesn't rust**
- **High level of readiness**
- **Saves resources**
- **Vehicles kept in good condition**

## **Military storage**

Since the 1960s sorption dehumidifiers have been used by defence forces in countries all over the world to protect materials. If you fail to regulate air humidity in a warehouse, mould and rust can easily develop. Sensitive electronic equipment can break down. A dehumidifier makes sure that the relative humidity, RH, does not exceed a certain value. This means that valuable material is in good condition when it is needed!

## **Underground shelters, hangars and stores**

By controlling the air humidity, protection is given to material stored in places such as underground shelters, hangars and stores. Maintenance costs can be reduced significantly with the aid of dehumidification, especially for sensitive electronic equipment.

**Dehumidifiers from Seibu Giken DST AB are used by defence forces in countries including the following:**

*Belgium, Norway, Finland, France, Germany, Sweden, Switzerland, Thailand, Great Britain and Italy.*
